SOFTWARE ENGINEERING CO-OP STUDENT

Full Stack Development | Python | Problem-Solving

- 4+ years of academic programming experience including full-stack web development, utilizing JavaScript, HTML, and CSS alongside core foundations in data structures, algorithms, and software design principles
- Proficient in analytical problem-solving, focused on developing optimal, user-friendly solutions for client products that directly enhance customer satisfaction and elevate the end-user experience
- Adept at collaborating across project teams and adapting quickly to evolving client requirements, consistently delivering high-quality work products under tight deadlines
- Experienced in analyzing business processes to translate client needs into actionable technical solutions, authoring clear technical documentation, architectural designs, and end-user guides to support project delivery
- Applied keen attention to detail maintain high standards of code and data quality, accuracy and strict compliance with project and technical guidelines

TECHNICAL SKILLS

- **Programming Languages:** HTML/CSS, JavaScript, Python, SQL
- **Operating Systems:** Windows, Unix, Linux, macOS
- **Development Tools:** Visual Studio Code, PyCharm, GitHub, Oracle SQL Developer
- **Other Tools and Technologies:** Jira, React, Microsoft Word, Microsoft Outlook, Microsoft Teams

EDUCATION

Software Engineering Technology (Co-op) Advanced Diploma
Centennial College, Toronto, ON

Jan. 2026 - Present
GPA: 4.340

Key Courses: Client-Side Web Development
Software Requirements Engineering

Web Application Development
Software Systems Design

Web Interface Design
Python Programming

Specialization in Computer Science, Bachelor in Science
Western University, London, ON

Sept.2020 – April 2024

Key Courses: Intro to Software Engineering
Data Structures and Algorithms

Software Tools and Systems
Object-Oriented Design and Analysis

Internet Algorithms

ACADEMIC PROJECTS

Car Rental Management System – SQL

- Co-developed a database system and authored comprehensive technical documentation – including stakeholder registry, ER diagrams, and SQL schemas – ensuring precise data validation, structured table population, and strict adherence to system specification

Software Requirements Specification Document – Home Matchmaking Application

- Collaborated in a team to author a comprehensive SRS document for MatchMyHome, a mobile and web platform connecting student tenants with seniors renting out extra space
- Designed technical UML diagrams to clearly document software workflows and system behavior

Video Games Review Website – SCRUM

- Led an academic project through the full software development lifecycle using Agile Scrum practices, emphasizing iterative verification and quality controls
- Managed task tracking and sprint planning in JIRA to monitor project progress, assigned backlog items, and meet critical deliverable deadlines
- Authored user stories and detailed acceptance criteria to establish clear testing guidelines and ensure software deliverables met functional specifications
- Conducted sprint reviews and functional software demos to validate feature implementations against initial requirements and maintain product alignment

WORK EXPERIENCE

Data Annotator

Jul. 2024 – Mar. 2025

TransPerfect, Remote

- Demonstrated a thorough understanding and strict adherence to project guidelines, ensuring high-quality work outputs
- Adapted swiftly to evolving quotas and updated document guidelines, maintaining high accuracy and flexibility within a fast-paced environment
- Collaborated with a team to collect, share, and cross-verify information, ensuring all data met specified guidelines and quality requirements prior to submission
